

Treating a wide range of patients with a unique ZEISS Optic.

ZEISS CT LUCIA 621P/PY

**The CT LUCIA from ZEISS is the new aspheric monofocal IOL
in the hydrophobic ZEISS cataract portfolio.**

With excellent stability, an improved injector system and a design that is uniquely forgiving to decentration, it delivers consistent visual outcomes for a broad range of patients and surgical situations.

Benefit from:

- **Consistent visual outcomes*** thanks to the patented ZEISS Optic (ZO) Asphericity Concept
- **Excellent stability** through the use of an optic-haptic junction and step-valued C-loop haptic
- **Intuitive injector handling** due to latest improvements to the fully preloaded injector system

*The data is taken from a simulation. The transferability of the results of such a simulation to patients with an actual implanted intraocular lens has not yet been scientifically proven. Whether the simulated impressions correspond to the actual visual impressions must be clarified in future invasive studies.
